

## $M_{22}:2$ in characteristic 2

- $F[M_{22}:2]$  has only one block, i.e. the principal block  $B_1$  of defect 8.
- $P \in \text{Syl}_2(M_{22}:2)$ ,  $Q \in \text{Syl}_2(M_{22})$
- $N_{M_{22}:2}(P) = P = N_{M_{22}:2}(Q)$ .
- The simple  $F[M_{22}:2]$ -module  $D(140)_{22:2}$  has vertex  $Q$ , the remaining simple modules have vertex  $P$ . Their Green correspondents and their sources, respectively, have the following Loewy structures:
